## Our goal is to enrich lives by making communication easier for each and every one of our valued customers

The team here at Words+ would like to thank every one of you for giving us the opportunity to meet your needs for the last 25 years. Helping people communicate with loved ones, friends and co-workers is deeply rewarding for everyone here both professionally and personally. Whether it's grade school children participating in classroom activities, a husband being able to tell his wife "I love you" for the first time in years, or professionals like astrophysicist Stephen Hawking and lawyer India Ochs continuing their work, people everywhere have given us the privilege of partnering with them in this most basic of human needs. We are grateful for the opportunity and very aware of the responsibility it entails.

We continue to provide the highest quality hardware and software communication solutions available, using the latest advances in technology to continually improve what we offer in our expanding product line. This issue of our Product Catalog contains some of our newer innovations in the field of augmentative communication including our Say-it! SAM PDA-based handheld devices, Say-it! SAM Tablets, and our newest offering, the Say-it! SAM PC software now available on our reliable and rugged TuffTalker and Freedom communication systems, or ready to install on your own tablet or laptop computer.

Our worldwide network of experienced Words+ Communication Consultants stand ready to evaluate needs, recommend equipment and train on solutions tailored to meet individual needs and requirements. They are a compassionate group of professionals who have dedicated themselves to helping people. You can find the consultant nearest you by clicking on your location on the map found under the Distributors tab on our website, or by simply giving us a call at our toll-free number (800) 869-8521.

Again, please accept our heartfelt appreciation for the privilege of serving you.

Sincerely,

*The Words+ Team*

# Say-it! SAM™ Communicator

## Full-Featured Hand-Held Communication

### Say-it! SAM Communicator is the most advanced full-featured palm-sized AAC device in its class...

Say-it! SAM was designed from the ground up to be the most powerful, easiest to configure, and simplest to use Augmentative and Alternative Communication (AAC) device available in its class, all at a surprisingly affordable price. People of all ages and physical challenges will love SAM

- Weighs only 9.8 ounces, just 1" thin
- Communicates with text and symbols
- Loud, clear voice
- Easy to set up, easy to use

for its powerful features, easy-to-navigate graphical interface, and loud and clear speech output. Speech Language Pathologists (SLP's) will love SAM for its extensive feature list, flexible design options, and fast and easy page setup.

**See for yourself why  
Say-it! SAM is the ideal  
choice for a palm-sized  
AAC device:**

- Slimmest communicator on the market – just 1 inch thin
- Includes BOTH dynamic display graphical interface AND intelligent keyboard interface
- Loud, clear voice
- Quick and easy online page setup does not require offline PC editor to setup pages
- Supports five different button actions and unlimited
- page links so you can build powerful and complex sentence structures
- Record and save custom voice messages on the fly and instantly link them to buttons
- Import your own symbols, photos and voice files and instantly link them to buttons
- Quickly import and export layouts and pages between different Say-it! SAM devices and offline PC's-- very convenient for Speech Language Pathologists
- Includes **Layout Designer** software to create and manage pages offline on your PC
- Fully customizable dictionary, abbreviation, pronunciation, and phrase lists
- Real-time **word completion**, **word prediction**, and **phrase prediction**
- Auto-learning feature learns your vocabulary and caters to how you speak for ultra-fast concept-to-spoken word turnaround-- Say-it! SAM gets smarter & faster as you use it!

SAM on-the-go

Always handy

Fits easily in pocket

- Magnification mode automatically enlarges the highlighted symbol
- Features DECTalk™ speech synthesis with nine different voices (4 male, 4 female, and 1 child's voice)
- Quiet mode magnifies text full screen for others to see allowing for silent communicating
- Spell-it! mode spells out the text entered letter by letter
- Includes over 6,500 color Mayer-Johnson, Inc. Picture Communication Symbols™ on both CD-ROM and 128MB memory card
- Includes pre-made SAMPLE layouts for quick and easy setup and instant usability
- **FREE** software upgrades and tech support

*"Communication is not only the essence of being human, it is also a vital property of life."*

# Say-it! SAM™ Tablet XP1

The Lightweight Tablet That Does It All!

- Now with a 20 GB Hard Drive
- Under 4 lbs. - just 2" thick
- 8 hour battery life
- 3 yr. warranty available

#### Elegant Tablet, Standard Software

Say-it! SAM Tablet XP1 is a lightweight Windows® XP tablet that runs a lot of the software that you are already familiar with: E Z Keys™, Say-it! SAM™ or Speaking Dynamically Pro®.

#### Robust and Portable

The XP1 tablet is originally designed to withstand the rigors of industrial use. The case is made of a thin and light magnesium alloy and high-impact plastic. This leads to a robust unit that comes with a one-year warranty which can be extended to a total of three years.

The XP1 weighs less than four pounds, and comes with a shoulder strap for ambulatory use. The tablet has a built-in battery and an external battery – together, the two provide eight hours of use for a typical user. For longer life, you can purchase additional external batteries to keep charged, and hot-swap them (without turning off the tablet) as you need them.

#### Familiar Software, Easy to Use

The XP1 comes with your choice of software for communicating at home, school and work, including:

*E Z Keys* – The most powerful and flexible solution for text users needing spoken and written communication.

*Say-it! SAM* – Our popular, easy to setup and easy to use software for symbol and text communication.

*Speaking Dynamically Pro and Boardmaker®* – Popular software for interactive talking activities using symbols and text, now available with Word Power.

#### Loud, Clear Voice

The XP1 comes with a choice of AT&T Natural Voices™ or DECTalk™, depending on the software package that you choose. For systems with AT&T Natural Voices, choose the one human-sampled voice that suits you best. Systems with DECTalk include all nine familiar voices.

Optional carrying case

### Dedicated Devices

The XP1 is available as a dedicated speech generating device (SGD) to comply with Medicare guidelines. Be sure to specify a dedicated device part number when ordering.

### Environmental Control

The U-Control III option gives you the ability to control TV, VCR, lights, and other appliances through your device, whether you are using symbols or text.

### Accessories

Mounting plates are available for mounting to wheelchair and desktop mounts. An optional integrated easel is available for using the XP1 on a desktop. Other available accessories give you more battery life, more file storage, and other benefits, as shown in the table below

### Some Questions and Answers:

**Q.** "How portable is it?"

**A.** It weighs 3.9 pounds with the external battery installed, so it is very portable. A fully enclosed soft bag with a clear, water-resistant window is available.

**Q.** "What is the price?"

**A.** Pricing for the XP1 and all accessories is shown to the right. Be sure to specify the software and voice that are best for you, and specify a dedicated device if you need a Medicare-approved dedicated speech generating device (SGD).

**Q.** "What is the battery life?"

**A.** Up to 8 hours, with the internal battery and the included external battery, depending on use. Additional external batteries and an external charger are available. You can hot-swap the external battery and get up to 5 more hours.

**Q.** "How long does it take to charge?"

**A.** It takes 6 hours to charge the internal and external battery. The external charger takes 4 hours to charge an additional external battery.

## Say-it! SAM Tablet SM1

The SM1 is an elegant, lightweight tablet with solid-state memory (no moving parts), and full scanning capability. The operating system is Windows® CE, (not XP) and features the popular DECTalk™ voice for crystal clear, loud speech output.

This unit features a brilliant 8.4" Active Matrix LCD display and the following multiple input modes:

- Direct select touch screen
- One- and two-switch scanning
- One-switch scanning using the touch screen as switch

It weighs 3.9 pounds, has a long battery life of up to 9 hours and a hot-swap external battery option to extend battery life even longer.

The SM1 also functions as a dedicated speech-generating device (SGD) that

is easy to learn and easy to use. It is available with Say-it! SAM Tablet software only.

See pages 16 and 17 of this product catalog for more information on all our Medicare-approved speech generating devices.

## Speaking Dynamically Pro® with Boardmaker®

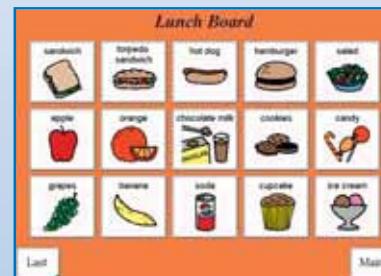

Speaking Dynamically Pro® is dynamic screen communication software which allows you to use a computer as a powerful speech-output device. Speaking Dynamically Pro® can also be used to create interactive educational activities. Some of the features include: text to speech, recorded (digitized) speech, pop-up boards, ability to link boards, random responses, abbreviation expansion, word prediction, ability to build sentences with symbols or text, ability to launch other programs and much more.

Boardmaker® is a communication and learning tool containing over 3000 Picture Communication Symbols™ (PCSTM). It is designed to enhance the language and learning process for students of all levels. This graphic database is the perfect tool for educators and SLP's. It includes over 100 templates for creating schedules, worksheets, custom-made games and activities, and much more. The program allows you to create professional-looking

communication displays, find and paste PCS™ into your display or another program, print your displays in black and white or color, import digital photos, and more.

WordPower™ is a word-based vocabulary design that is available for Speaking Dynamically Pro®. WordPower combines the features of core vocabulary, spelling, and word prediction. The system capitalizes on the fact that a core of just 100 words accounts for approximately 50% of most words spoken. There are four components included with WordPower:

WordPower (for text users), Picture WordPower (for users who need picture cues), Scanning Word Power, and Scanning Picture WordPower.

### Ordering Information

Speaking Dynamically Pro with Boardmaker is included in many of our complete system packages, including Say-it! SAM Tablet, Freedom and TuffTalker systems. See the appropriate page for the system that is right for you. WordPower is an additional option available with any of our Speaking Dynamically Pro system packages.

# SYSTEMS

## Freedom™ Toughbook

Communication Without Compromise  
and Built to Last

- Magnesium-alloy-protected LCD display
- Shock-mounted components
- Three-year warranty

**BUILT-IN  
WIRELESS!**

- EZ Keys™, Say-it! SAM PC™ or Speaking Dynamically Pro™ with Boardmaker™ and Word Power
- Multiple access modes
- Windows® XP Professional

### Turn It On and You're Ready to Go

Freedom Toughbook combines great computer hardware with great communication software in our most popular system.

### Reliable Hardware

The Freedom Toughbook hardware features a semi-rugged notebook made by the leader in ruggedized computers, Panasonic. It has a big magnesium-alloy-protected LCD display, a fiberglass-reinforced lower case, and a shock-mounted hard drive.<sup>1</sup> This unit features a fast Pentium processor with plenty of RAM, and lots of hard disk space to let you store communication displays, speech, sounds, and documents.

### Powerful Software

Freedom Toughbook comes preloaded with your choice of communication software:

- EZ Keys – The most powerful and flexible solution for text users needing spoken and written communication.
- Say-it! SAM – Our popular, easy to setup and easy to use software for symbol and text communication.
- Speaking Dynamically Pro with Boardmaker – popular software for interactive talking activities using symbols and text now available with Word Power.

### Who Can Use Freedom Toughbook?

Freedom Toughbook can be used by all level users, including non-literate or non-speaking individuals, those who use text to communicate, those who prefer using pictures and symbols to communicate, or those who desire computer access. All types of users, including those with ALS, cerebral palsy, spinal cord injury, closed-head injury and other conditions, will find Freedom Toughbook indispensable for everything from meeting everyday communication challenges to surfing the Internet.

Comes with back-mounted Micro CommPac.

### High-Quality Voice

The Freedom Toughbook system also includes our Micro CommPac amplifier and your choice of voice synthesizers:

- AT&T Natural Voices™, our most popular and realistic software voices
- DECTalk™, the long-time industry standard voice synthesis software

### Access Modes

With Freedom Toughbook, you choose the access method that's most effective for you. Operate the communication software and other applications using a standard keyboard, mouse, Head Mouse™, Tracker Pro™, switch access, joystick, or Morse code. Please see our full line of input devices and accessories on page 22.

### Environmental Control

Freedom Toughbook is compatible with our U-Control III environmental control unit. This optional unit lets you control TV, VCR, lights and other appliances from your communication software.

### Windows Versatility

In addition to serving as a highly-effective communication device, Freedom Toughbook is a Windows® XP Professional

laptop computer. That means there are thousands of Windows applications that you can install for school, work, or play.

## Built-in Wireless

The Freedom Toughbook has Wi-Fi wireless built in. Combined with a wireless router (purchased from Words+ or from your local computer store) in your home, EZ Keys users can print, surf the web, send and receive email, shop online, and play online games around the house without any cables. Many public locations also provide wireless "hotspots" that you can connect to wirelessly, including schools, fast food restaurants, coffee shops, hotels, airports, and others.<sup>2</sup>

**Words+ is an Authorized  
Panasonic Toughbook  
Premier Partner**

## Support

All of our systems come with lifetime toll-free technical support. In addition, EZ Keys and Say-it! SAM come with free software updates for life.

1 Although all of our Toughbook computer systems are rugged or semi-rugged and designed to withstand the rigors of the typical AAC

environment, they are not indestructible. They are computers and must be handled with care. Words+ is not responsible for units that are damaged due to abuse or misuse.

2 You will also need an account with your local Internet service provider (ISP), and a DSL or cable connection for Internet connectivity. Hotspots in commercial locations may charge extra fees.

## Freedom™ Extreme

### The Super-Rugged Computer Used by the Police and Military

Freedom Extreme offers all the same software and voice options as our Freedom Toughbook systems, but uses the latest super-rugged computer from Panasonic. This is the same fully-rugged unit that is used in the field by police, fire, and military services.

If you're a user on the go, you want a communication device you don't have to treat with kid gloves. That's why Freedom Extreme comes with a removable hard drive mounted in shock absorbing gel and encased in stainless steel. The Freedom Extreme has a 13" daylight-readable TFT Active Matrix Color LCD for indoor/outdoor use, and a touch screen. It has a moisture- and dust-resistant LCD, keyboard and touch pad, and sealed port and connector covers. The finishing touch to this extreme machine is a magnesium-alloy

shell that functions as a sheet of armor, protecting your computer from the rigors of the AAC environment, with a built-in handle.

As with our semi-rugged Freedom Toughbook, you select the communication software and voice synthesizer that are most appropriate for you. You can also add optional input devices as needed, and add environmental control and wireless components for maximum independence.

# SYSTEMS

## Freedom™ LITE Convertible

### All the Features of a Tablet and a Notebook In a Small, Reliable Package!

- Both a Tablet and a Notebook
- Weighs just 3.5 pounds
- 3-Year Warranty

This extraordinary new AAC communication system from Words+ gives you the option of quickly changing from touchscreen tablet to laptop computer and back again with the touch of a button and a twist of the wrist.

#### Versatile, Portable, Reliable

As a tablet, this compact unit has a nine inch, high-resolution display, and a touch screen that responds to the lightest finger touch. As a notebook, it also has a full keyboard. Clients who have keyboarding skills will find the keyboard size and pressure very usable. Parents, teachers and clinicians will find it very convenient to have the keyboard always available when you need it for configuration changes, and for adding vocabulary and activities.

At under four pounds, the system is light enough to take with you wherever you go. The magnesium alloy upper and lower case provides more protection than plastic casings found on other devices. In addition, the hard drive is shock-mounted to protect your communication data.

The system battery gets over five hours of continuous use from a full charge, and you can extend the battery life further by letting the backlight turn off automatically when you aren't using the device, getting you through the day without a recharge. You can also extend the battery life with an optional external battery and charger. The system also has built-in wireless capability, giving you freedom of movement and continuous connectivity when you are near a wireless access point at home, at school, or at many locations in the community.

#### BUILT-IN WIRELESS!

Surf the internet or e-mail someone around the block or around the world, while communicating with family and friends with a loud, clear voice.

#### Pre-Loaded with Great Software

The Freedom LITE Convertible comes with your choice of software for communicating at home, school and work, right out of the box, including:

**E Z Keys** – The most powerful and flexible solution for text users needing spoken and written communication.

**Say-it! SAM** – Our popular, easy to setup and easy to use software for symbol and text communication.

#### Speaking Dynamically Pro and

**Boardmaker®** – Popular software for interactive talking activities using symbols and text, now available with Word Power.

Each software program offers a variety of access methods. Among these are touch-screen, switch scanning, joystick, trackball, head-pointing, alternative keyboards, and more.

#### Dedicated (SGD) Version Available

A Medicare/Medicaid approved dedicated version of the Freedom™ LITE Convertible is also available. Please see page 16 for more information.

# SYSTEMS

## TuffTalker™ Plus

A revolutionary communication system that blends form and function into one easy-to-use AAC device

- Touchscreen, switch, mouse, Morse code, or joystick access
- Built-in wireless capability

- Available with Say-it! SAM PC™, EZ Keys™, or SD Pro® with Boardmaker® and Word Power
- Rugged magnesium case
- Shock-mounted hard drive

Windows® XP and your choice of Say-it! SAM PC, EZ Keys or Speaking Dynamically Pro™ with Boardmaker. We at Words+ want you to enjoy the most up-to-date, efficient communication software on the market. That's why we offer free software upgrades for life on Say-it! SAM PC and EZ Keys. Because TuffTalker Plus is a computer system, you can operate a variety of Windows-compatible software programs, including e-mail and Internet-browsing software. Powered by a long-lasting lithium-ion battery, TuffTalker Plus also comes with an AC adapter.

### Superior Voice Quality with Micro CommPac

Crystal-clear communication is important to our users. That's why TuffTalker Plus features Micro CommPac, our high-quality speech output device. Choose either AT&T Natural Voices™ or DECTalk™ voice synthesis software for the most realistic and intelligible voices in the industry.

### Powerful Communication in an Instant

TuffTalker Plus is a fully integrated communication system that offers you durability, power, and convenience. The unit conveniently mounts to your wheelchair for better mobility.

TuffTalker Plus' exceptionally large, moisture-resistant touchscreen is one of its most compelling features, making it ideal for direct selection. And because the touchscreen is always visible, you're ready to communicate wherever and whenever you need to. Powered by a super-fast Intel Pentium processor, TuffTalker Plus features plenty of hard drive space. Your computer system comes fully loaded with

### Access Modes

In addition to the large liquid crystal display touchscreen, TuffTalker Plus also features inputs for use with single or multiple switches, IST Switch (see pg. 22), Morse code, joystick, HeadMouse® Extreme, or Tracker Pro™.

### Custom Table Mount

TuffTalker Plus comes standard with a table mount. This multi-position mount provides support for the unit on a table top, desk, or other flat surface. Rubber feet provide a high-friction

### Popular optional components:

- Additional RAM (64MB, 128MB or 256MB)
- Additional lithium-ion battery (11.1V, 5.4AH)
- External battery charger
- 12-volt or 24-volt adapter
- Porta-Power Plus
- Simplicity wheelchair mount

# TuffTalker™ Convertible

Get the Best of Both Worlds in One  
Extraordinary System!

- **Tablet and Laptop in one**
- **Fully Rugged**
- **Under 6 lbs.**

This extraordinary new AAC communication system from Words+ gives you the option of quickly changing from touch-screen tablet to laptop computer and back again with the touch of a button and a twist of the wrist.

#### Pre-Loaded with Great Software

Fully loaded with Words+ Say-it! SAM PC™, EZ Keys™, or Speaking Dynamically Pro™ with Boardmaker and Word Power and Microsoft Windows® XP Pro, this system is ready to help you start communicating right out of the box! Our Micro CommPac adds loud, crystal clear sound so you can be heard even in the noisiest environments. The system also has built-in wireless capability, giving you freedom of movement, and up to 6 hours battery life gets you through the day without a recharge. A convenient hot-swap battery feature extends your productivity in just seconds. At under 6 pounds, the system is light enough to take with you wherever you go, and for your convenience, we've added an external CD ROM drive. Surf the internet, communicate with family and friends with a loud, clear voice, and e-mail someone around the block or around the world. A speedy 1.1MHz Intel® Pentium® M Processor, 256 MB of RAM (expandable to 768 MB), a big 40GB shock-mounted hard drive and a 10.4" active matrix touchscreen display round out the specs on this exciting communication system from Words+.

# SGD Medicare and Medicaid-Approved

**What is an SGD?** "Speech Generating Device" (or "SGD") is a term used by Medicare, Medicaid, and other insurers. An SGD is a dedicated communication device designed specifically to run communication software only. As a result, a notebook or PDA that is an SGD is excellent for communication, but does not give you access to all the extra things that a notebook or PDA would normally do, such as running educational software, work-related applications and games, surfing the web, sending and receiving email, etc.

**Why choose an SGD?** Choosing an SGD lets you take advantage of funding from Medicare, Medicaid and other insurers who generally follow Medicare's SGD guidelines. As a result, many people who would not otherwise be able to afford a communication device will be provided with one, as long as it meets the SGD requirements. All the devices below meet the SGD requirements.

Freedom™ SGD	Freedom™ LITE SGD	Freedom™ LITE Convertible SGD
 	 	 
<p>The Freedom SGD is our most popular SGD option, and has similar features to our Freedom Toughbook. This extremely reliable unit comes with E Z Keys, Say-it! SAM or Speaking Dynamically Pro communication software preloaded. It includes our Micro CommPac amplifier with an AT&amp;T Natural Voice or DECTalk voice synthesizer. A full range of input devices (switches, joysticks, etc.) and mounting solutions is available. People who choose the Freedom SGD like its:</p> <ul style="list-style-type: none"> <li>• Large 15" display</li> <li>• Up to 9 hours battery life</li> <li>• Standard size keyboard (for those who use the keyboard)</li> <li>• Fast processor for powerful communication</li> <li>• Lots of storage for words, sentences, symbols, pages, digitized recordings</li> </ul> <p><i>Please see page 10 for more information</i></p>	<p>The Freedom LITE SGD is our mid-sized notebook SGD option. This extremely reliable unit comes with E Z Keys, Say-it! SAM or Speaking Dynamically Pro communication software preloaded. # Speech Generating Devices

**Why choose an SGD based on a notebook or PDA?** Most Words+ systems are built around off-the-shelf notebooks and PDAs to give you a number of advantages. These devices are made for the rigorous consumer, commercial and industrial markets, and tend to be extremely reliable (especially the manufacturers we choose!). Because they are made in larger numbers than are possible in just the AAC industry, the manufacturers have extensive quality control systems in place. If ever does need repair, parts and service are readily available. The current models are constantly being updated to stay competitive, so you get the newest technology on the market. And if you ever want to upgrade, you can often upgrade just the feature you want (such as memory, disk space, etc.) without reinvesting in an entirely new unit.

## Say-it! SAM™ Communicator SGD

## Say-it! SAM™ Tablet SM1 SGD

## Say-it! SAM™ Tablet XP1 SGD

The Say-it! SAM Communicator SGD is our smallest and lightest SGD because it is based on a Personal Digital Assistant (PDA). This elegant and reliable unit comes with Say-it! SAM communication software and the DECTalk voice synthesizer preloaded. It is accessed through the touch screen only. People who choose the Say-it! SAM Communicator SGD like its:

- Ultra-compact size (just ten ounces and fits in a pocket)
- Easy to learn, easy to use
- Loud, clear voice
- Uses words, sentences, symbols, pages, digitized recordings

Please see page 4 for more information

The Say-it! SAM Tablet SM1 SGD is our lowest-cost tablet SGD. This extremely reliable unit comes with Say-it! SAM communication software and the DECTalk voice synthesizer preloaded. It can be accessed using the touch screen, or one- or two-switch scanning, or by using the touch screen as a switch. People who choose the Say-it! SAM Tablet SM1 SGD like its:

- Easy to learn, easy to use
- Compact size (under four pounds)
- Loud, clear voice
- Long battery life
- All solid state, no moving parts

Please see page 7 for more information

The Say-it! SAM Tablet XP1 SGD is our high-performance tablet SGD. This extremely reliable unit comes with E Z Keys, Say-it! SAM or Speaking Dynamically Pro communication software preloaded. It includes an AT&T Natural Voices or DECTalk voice synthesizer. It can be accessed using the touch screen, one- or two-switch scanning, or joystick, or by using the touch screen as a switch. People who choose the Say-it! SAM Tablet XP1 SGD like its:

- Compact size (under four pounds)
- Loud, clear voice
- Powerful symbol- and text-based software
- Fast processor for powerful communication
- Lots of storage for words, sentences, symbols, pages, digitized recordings

Please see page 6 for more information

# SOFTWARE

## EZ Keys™

Industry-Leading Communication and Computer Access Software – the Original and Still the Best!

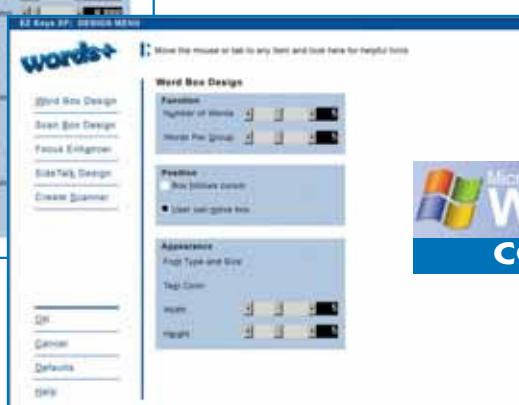

- Enables Computer Access
- Rapid Text To Speech
- Dual Word Prediction
- Abbreviation Expansion
- AT&T Natural Voices™, DECTalk™ & Other Voices
- Free Software Upgrades!

**Sir Stephen W. Hawking,**  
Lucasian Professor of Mathematics  
at the University of Cambridge and  
world-renowned astrophysicist, uses  
EZ Keys to lecture to his students,  
write books, and deliver speeches  
around the world.

Easy to use menus make customizing  
EZ Keys to your needs a breeze!

Screens may vary depending on your operating system

Imagine the convenience of having your AAC communication software work with the Windows® operating system on your PC. That's the idea behind our revolutionary E Z Keys™ software.

## Who Can Use E Z Keys?

E Z Keys is software for PC-compatible computers, designed for users who have at least a third-grade reading level and cannot speak, or for users who speak and desire adapted computer access. Users with a wide range of disabilities find E Z Keys simple to operate and essential to everyday communication. E Z Keys allows the literate user to do everything from typing a letter, to engaging in conversation with a friend, to turning on the TV. World-renowned astrophysicist Sir Stephen W. Hawking uses the software to deliver lectures around the world, while a nine-year-old boy uses it to talk with friends and to participate in classroom activities at his school in Louisiana.

## Save Time with Word Prediction and Abbreviation Expansion

E Z Keys comes with many invaluable time-saving features, including dual word prediction and abbreviation expansion. When you begin to type a word, E Z Keys displays a table of the six most frequently used words that begin with those letters. You select the appropriate word from the display, and E Z Keys instantly types the remainder of the word. With next word prediction, the program actually learns your word patterns and displays a list of the last six words you used in conjunction with the previous word. Simply select the correct word and E Z Keys types it for you. E Z Keys also allows you to use abbreviations for frequently used words and phrases and for Instant Speech. Simply type the abbreviation and E Z Keys automatically substitutes it with the complete word or phrase. You can even use this powerful feature to have your computer perform certain tasks, such as turning on the lights or printing a file.

## Conversations in an Instant

Store hundreds of thousands of phrases and sentences, and then retrieve them instantly using E Z Keys' Instant Phrases. Group phrases according to subject, such as family matters, sports, personal

needs, jokes, or hobbies, and then use them quickly in everyday conversations.

## Express Yourself with Our Built-in Reader Feature

Delivering a speech to a large audience or giving a talk to a small family group is effortless with our Reader feature. Simply create a speech using your word processor, and then speak it one sentence at a time using keystrokes or switch activation.

## Operate E Z Keys Your Way

Words+ understands that not everyone can use a mouse. That's why we designed E Z Keys to provide complete mouse emulation using alternative inputs, such as a keyboard or even a slight movement of an eye using switch activation. A variety of access modes, including standard keyboard, expanded keyboard, joystick, single- and multiple-switch scanning, and Morse code, is available with E Z Keys software. You can even switch from one access mode to another without exiting the program. A "no voice" version of E Z Keys is also available for users who do not require speech output, but who do want adapted computer access.

## Explore Your World with E Z Keys

E Z Keys allows you to pursue a variety of activities in and out of the home. Using your internet connection, you can send and receive messages or explore the World Wide Web.

## Environmental Control

Experience new independence with the

optional U-Controll III system. Control your TVB, VCR, DVD player, lights and appliances from the convenience of your computer keyboard (see page 20 for full details).

## Talking Screen™

*The Original Dynamic Display*

Based on the simple concept of picture boards that non-speaking individuals used to rely on by pointing to images to communicate, Words+ originated the first pictographic communication system with a dynamic display in 1988. Since then, thousands of people have benefitted from the ability to communicate using symbols and familiar photos. While Say-it! SAM has replaced Talking Screen as our leading symbol-based program, Talking Screen is still used by those who want the simplest dynamic display device for the user, and is still available on many Words+ systems today. Please call Words+ for more information.

Product	Product Code	Item Price
E Z Keys for Voice Synthesizers*	EZKWINXP	US\$ 1,395.00

### Minimum System Requirements:

**Windows® 2000/XP:** Pentium 300 MHz or higher, 128MB RAM (256MB recommended), 10MB free hard disk space, available parallel port or USB port, Sound Blaster compatible sound card (if using voice output)

**Windows® 95/98/Me:** Pentium 1 133MHz or higher, 16MB RAM, (32MB recommended), 10MB free hard disk space, an available parallel port, Sound Blaster compatible sound card (if using voice output)

For detailed specifications on this product, call Words+ at 800-869-8521.

**Product specifications and prices are subject to change without notice.**

# ENVIRONMENTAL CONTROL

## U-Control™ III

Operate your TV, lights and more directly from your computer!

Imagine the convenience of controlling your TV, VCR, DVD player, lights, electric drapes and other appliances in your home directly from your computer. U-Control III allows you to do all this and more.

### Environmental control means greater independence

The U-Control III is a universal remote control that connects to your PC through the USB or Hi-Speed USB port. Once connected to your computer or AAC device running Words+ software, you can control your TV, VCR, DVD player, X10 devices, and other appliances connected to the U-Control's appliance modules.

U-Control III is a *trainable* remote control. With the remote control from your appliance, or another universal remote control which can control your appliance, you can train the U-Control III to perform virtually all of the functions of that remote.

After this training, the U-Control III can replay the trained patterns, thereby controlling your appliance. Because the U-Control III is a trainable remote control, it works with most old appliances, and will work with most new appliances as they are introduced by various manufacturers.

### Command Center convenience

The U-Control Command Center lets you remotely control lights and appliances from anywhere in your home. You can keep it near your home entertainment system or by your bedside. By using your U-Control III Remote Control or by manually pushing the buttons on the Command Center, you can turn on or off the lights around your home without getting out of your chair. You can turn off your child's radio, TV or nightlight

from your bedroom. If you hear a suspicious noise at night, you can turn on all lights connected to U-Control Appliance Modules with the push of a button on your Command Center or through your AAC device. You can even send one command to turn off everything in the system to save energy.

### Integrated software

The U-Control III works with EZ Keys™ and Say-it! SAM PC™ from Words+. Using EZ Keys with U-Control III, you can operate your lights and appliances from a popup menu, or by using easy-to-remember text abbreviations. Using Say-it! SAM PC with U-Control III on our Freedom and TuffTalker systems, you can program any symbol to control your TV, VCR, lights, etc. U-Control III is also available as a built-in option on the Say-it! SAM Tablet XP1, giving you an elegant and powerful tablet package.

Alarm module,  
appliance modules  
and Command Center

# Micro CommPac™

## Quality Speech Output Far Superior to Your Computer's Internal Speaker

**Micro CommPac with AT&T Natural Voices™,  
DECtalk™ or NeoSpeech™**

AAC systems no longer have to be big and bulky to produce high-quality, clear voice output. Micro CommPac gives you quality voice synthesis—usually only heard in larger, more expensive units—that is far superior to your computer's internal speakers.

Micro CommPac provides amplification for the following voice synthesizers:

- AT&T Natural Voices™, our most popular and realistic software voices
- DECtalk™, the long-time industry standard voice synthesis software
- Almost any SAPI 5-compatible voice on the market.

Micro CommPac also amplifies recorded messages, digitized sound effects, multimedia sounds and telephone sounds, depending on the capabilities of your AAC device.

### Small and light

Micro CommPac weighs less than one pound. It measures 7" x 4.5" x 1", about the same size as a paperback book.

### Important Part of an AAC system

Micro CommPac plugs into an available USB port on your notebook or desktop

*Micro CommPac shown here mounted to the back of a Freedom System.*

AT&T Natural Voices™ sound real because they're sampled from real human speech. AT&T Natural Voices are available on most Words+ communication systems. Choose from ten voices, five male and five female, each with a distinctive sound and personality. Please call for more information on how you can obtain one of these extraordinary voices for most Words+ systems.

Fonix DECtalk text-to-speech technology (TTS) is the smallest footprint, full-featured, multi-language TTS in the industry. DECtalk has been the industry standard software voice for many years. Every DECtalk license includes nine familiar voices: Betty, Dennis, Frank, Harry, Kit, Paul, Rita, Ursula and Wendy. Please call for more information on how you can obtain these highly-understandable voices for most Words+ systems.

NeoSpeech is the fastest-growing provider of speech technology and applications for the mobile, enterprise, entertainment and education markets, offering high quality Text-to-Speech engines for U.S. English and all major European and Asian languages. Please call for information on how you can obtain one of these voices for most Words+ systems.

Product	Product Code	Item Price
Micro CommPac w/AT&T Voices .....	MC-ATT.....	US\$ 499.00
Micro CommPac w/DECtalk .....	MC-DEC .....	US\$ 899.00
Micro CommPac w/NeoSpeech .....	MC-NEO.....	US\$ 499.00

**System Requirements:** Your computer must have an internal sound card and an external headphone or speaker jack.

The standard Micro CommPac plugs into your USB port, works with Windows® XP and Windows® 2000 only, and does not require an AC adapter. Computers running older versions of Windows®, and computers that have no available USB ports but do have a parallel printer port (LPT port), require the parallel port Micro CommPac, which also comes with an AC adapter. If you need the parallel port version, please specify at time of purchase. Pricing is the same as the USB version.

Two-voice auditory scanning using an external earphone is available on special orders. Must be specified at time of purchase. Call Words+ for details.

# INPUT DEVICES AND ACCESSORIES

More Options for your Communication System

## Infrared/Sound/Touch (IST) Switch™

Operate a variety of communication devices and software with virtually any kind of body motion.

Using a variety of sensors, the IST Switch provides positive, consistent action with virtually all body movements and features a convenient sensitivity adjustment that lets you set the switch for the body site to be used.

## Tracker Pro™

Tracker Pro operates from the USB port of your computer or compatible AAC device, and gives you the freedom to be completely mobile without need of battery packs or power adapters.

## Porta-Power Plus™

The Porta-Power Plus rechargeable battery pack is designed to provide a longer operating life (4-6 hours) for notebook computers and other portable, battery-operated devices and accessories. The pack provides 12 volts, 6.5 amp hours, weighs 6.4 pounds, and measures 5 1/2" x 3" x 10". Complete with a 110-volt charger, the Porta-Power Plus recharges in 12 to 14 hours.

**Note:** A 12-volt adapter designed for your specific notebook computer is needed to connect the Porta-Power Plus to your computer.

## Slim Armstrong

The Slim Armstrong mount is an effective means to mount head switches, hand switches and other switches to wheelchairs. It is lightweight, rugged, and easy to install.

(Shown with optional Jelly Bean switch)

## HeadMouse® Extreme

HeadMouse Extreme

operates from the top of a computer monitor, laptop computer, or augmentative communication device, and measures the user's head

movements. HeadMouse Extreme connects to the computer or augmentative device through a USB port and operates using standard mouse drivers.

## Cyberlink™

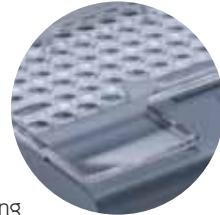

The Cyberlink is a breakthrough technology that allows people, regardless of physical condition, to control and communicate through their computers completely hands-free. The Cyberlink

senses and responds to minute surface electrical signals generated from subtle muscle, eye movement, and brainwave activity detected at your forehead.

## Keyguards

Often, persons who cannot ordinarily use a standard keyboard are able to do so if a keyguard is installed on the keyboard. The keyguard is mounted over the keyboard. This allows the user to rest his hand on the keyboard without activating any keys, and reach through the holes to push keys when desired. We make keyguards for most of our systems. Call for more information.

### Eyebrow Switch™

The Eyebrow Switch is a single switch that comes mounted on a lightweight, adjustable visor. The switch is activated by a slight upward movement of the user's brow.

### Expert Mouse™

The Expert Mouse is a comfortable trackball device ideal for right- or left-handed users.

### IntelliKeys® USB

IntelliKeys®, a keyboard developed by IntelliTools Inc.™, makes computing fun and accessible.

Simply slide any of the six colorful overlays into IntelliKeys and type on a keyboard that matches your personal needs. IntelliKeys plugs into the USB port of your personal computer.

### Microswitch™

The mechanical Microswitch is a very small and versatile single switch. This microswitch is most commonly used by holding it in the hand and activating it with the thumb or forefinger.

### Joystick

The joystick is the fastest and easiest input method for some users, especially those who use joystick wheelchair controls. Many users find it less fatiguing than direct selection or pointing. For example, in EZ Keys, the user directs the cursor to the desired character. The joystick plugs into your Words+ switch adapter.

### AbleNet™ Family of Switches

These colorful switches are the Jelly Bean Switch (2.5" dia.), Big Red (5" dia.), and the Specs Switch (1 7/8" dia.).

Children love the bright colors. Switches can be used on a table or desktop, or they can be mounted in a variety of ways for easy access.

### HeadMouse™

The HeadMouse emulates a standard mouse by translating the movements of a user's head into directly proportional movements of the computer cursor. A wireless sensor tracks a tiny reflector placed on the forehead or glasses.

### Logitech Trackball

The Logitech Trackball is designed for the right hand to comfortably rest on the case while the thumb activates the trackball.

# DIGITIZED SPEECH

## MessageMate™

The Most Rugged Communication Device Available

- Easy to use
- Available with a variety of levels and recording times
- Extremely durable construction

- Simple to record
- Long-lasting battery
- Keyboard or switch operation
- Scanning capability

MessageMate is ideal for use in a classroom setting

### Functionality at Its Best

Because everyone's needs are unique, there are four different MessageMate models to choose from: Multi-Level MessageMate 40, MessageMate 40, MessageMate 20, and Mini-MessageMate. The 20 and 40 models are available with a variety of recording times.

### Multi-Level MessageMate 40

Our most popular MessageMate, this multiple-level unit features four different levels, providing up to 10 minutes of total recording time and storage for up to 144 messages. It also has a lock feature that prevents the user from accidentally switching levels.

### MessageMate 40

This single-level unit features

40 keys, 150 seconds of total recording time, and storage for up to 40 messages.

### MessageMate 20

The original MessageMate, this single-level communication device comes with 20 keys and either 75 seconds or 150 seconds of total recording time.

### Mini-MessageMate

The smallest member of the MessageMate family, it features eight large keys and 60 seconds of total recording time. Individual switch ports allow different users to play different individual keys in group activities.

### Voice

MessageMate features the highest quality recording available. Record any voice – male, female, child, or adult in any language. The volume is fully adjustable, so users feel comfortable communicating in a variety of social situations, from private conversations to noisy parties. And programming MessageMate is simple and intuitive. Simply record your message and MessageMate is ready to help you to communicate any time, anywhere.

## Battery Life

Each MessageMate has a built-in rechargeable battery. A full battery charge allows the user to speak approximately 5,000 messages. Most users speak for weeks on a single charge.

## Keyboard or Switch Operation

All MessageMates feature membrane keys for a light touch, with an optional stiffener for a heavier touch. Keys are easy to access and can be combined to make larger keys. Four different accept times help eliminate accidental key selections. MessageMate 20 and 40 models are also switch-accessible and feature fully adjustable scan rates. Mini-MessageMate has individual switch inputs for each key.

## Convenient Message Builder Feature

Speak clear, concise messages quickly and efficiently with our Message Builder feature. Available

only on MessageMate 40 and Multi-Level MessageMate 40, Message Builder allows you to select words or phrases from several buttons and combine their recording together to create a single message. Simply turn on the Message Builder feature and build your message. Then press the Speak key to say your message, the Repeat key to repeat the last spoken message, the Clear key to erase the entire message, or the Back key to erase the last entry.

## MessageMate Accessories

Each device comes with a comprehensive user's manual, an AC adapter, and a long-lasting, internal rechargeable battery. You can also purchase optional accessories, such as a carrying case, a keyguard, and symbol stickers. Prices for these accessories are listed below.

# Mounting

## Simplicity™ Wheelchair Mount

Swings Away and Locks in the 90° and 180° Positions

Simplicity is a wheelchair mounting system designed for use with portable computers and other devices. Well known for its exceptional quality and reliability, this rugged wheelchair mounting system is made of high-quality stainless steel tubing and aircraft-quality aluminum joints.

- Swings away and locks in the 90° & 180° positions for easy in and out access
- Unique slide-down action allows access in and out of the chair without removing your AAC device
- Compatible with round, square & rectangular tubing
- Provides positive, secure support for your device in all positions
- Features a warranty on all parts against defects in materials or workmanship

# Mounting

## Simplicity™ Table Mount

Tray is Interchangeable with the Simplicity Wheelchair Mount

### Maximum Flexibility

Our versatile new table mount can be adjusted up and down, tilt to just the right angle most comfortable for you, and even swivel from side to side. Adjustments are easily made by hand using our secure twist and lock handles. No tools are required! We also include bolts you can use to replace the handles, in case you want to keep users from changing the adjustments. Made of machined aluminum and stainless steel, this mount is extremely rugged, portable and lightweight.

### Mount 'Stays Put' on a Table

Slip-resistant rubber "feet" ensure the mount stays put on a table, desk or hospital tray. Select from a variety of quick-release blocks and trays to attach your communication system securely, or use the mounting built into your device to attach to our standard 7/8" mounting bar. Quick-release lets you easily transfer your system from one mount to another, including our Simplicity Wheelchair Mount.

Complete System has a wide adjustment range

Base only, attach your device

## Other Services Words+ Offers:

### Equipment Rentals

Many of the communication systems and software programs featured in this catalog are available for rent. Some restrictions do apply, so please contact our sales department for more information. Rentals are subject to availability. Call us toll-free in the United States at 800-869-8521.

### Loans

As part of its commitment to the AAC community, Words+ is pleased to loan certain equipment and software programs for the purpose of determining suitability for a particular client. There is no fee to borrow our equipment; however, there may be a shipping, handling, and insurance charge. This fee and a signed loan agreement must be returned to Words+ before the equipment can be shipped to you. The loan period is for one week only and certain restrictions apply.

For more information, call Words+ customer service at 800-869-8521.

To Order Products: (800) 869-8521 or (661) 723-6523

# General Information

## Words+ Communication Consultants

Words+ has a network of trained Communication Consultants worldwide who will work with you to select the right communication device to meet your needs. In addition to conducting workshops and providing hands-on demonstrations of Words+ products, they also function as an excellent professional resource for speech-language pathologists, physical therapists, special education teachers, and other professionals. For the name, address, and telephone number of your local communication consultant, call 800-869-8521, or visit our website at [www.words-plus.com](http://www.words-plus.com).

## Customer Service

Our friendly staff of customer service representatives is available to provide up-to-date information and technical support for any Words+ product, even if it was purchased secondhand from someone else. If you have a question about any of our products, please call 800-869-8521 or outside the U.S., call (661) 723-6523.

## Price Quotes

Call our Sales Department at 800-869-8521 for a price quote on any of our products.

## Technical Support

Technical support is available Monday through Friday, 6am to 5pm (Pacific Time). If you have difficulty or you have questions, please call our technical support staff at 800-869-8521, or (661) 723-6523 outside the U.S., or fax us at 661-723-2114. Emergency technical support is available 24 hours a day, seven days a week (an emergency is when your system is down and you are unable to communicate).

## Words+ Web Site

You can reach Words+ on the Internet at <http://www.words-plus.com>. The site includes a list of our communication consultants worldwide and a list of conferences in your area. Download free upgrades and demos of Words+ software, and explore our links to other assistive-technology Web sites.

## Rentals and Loan Equipment

Many of the communication systems and software programs featured in this catalog are available for rent. For information on

rental fees and availability, please contact our sales department at (800) 869-8521

Certain equipment and software programs are available as loans to determine the suitability for a particular client. There is no fee to borrow our equipment, however, a shipping and handling charge may apply. The S&H charge and a signed loan agreement are required before equipment can be shipped. Please call Words+ for more information

## Repair Service

In the unlikely event that your system needs to be sent in for service, we will make every reasonable effort to see that it is repaired and returned to you as quickly as possible. This policy applies regardless of whether your equipment is under warranty. All out-of-warranty repairs must be paid for in advance or by C.O.D. return. If you think an item should be sent in for repair, call us first. Many times the problem can be corrected over the phone, saving you time and money. If your unit must be returned, please be sure to do the following:

1. Call for a Return Merchandise Authorization (RMA) number. Items returned without RMA numbers will not be accepted. We will also need contact, billing and shipping information at this time.
2. Write the RMA number on the outside of the package.
3. Use at least 3-4" of packing material around the item, and pack it in a strong box using sealing tape. Do not use paper or string on the outside of the box. Insufficient packing material may cause extreme damage to your equipment.
4. Enclose a note with RMA number describing the problem. Include a daytime phone number and the street address where the item is to be returned after the repair is complete.
5. Ship by UPS and insure the package for the amount you paid for the item(s), or call us for an insurance valuation. If the item is under warranty, it will be returned free of charge by UPS Ground; if you wish to have the item returned using faster delivery, you must pay the difference. If the item is not under warranty, it will be returned C.O.D., unless prepayment has

been made, and shipping charges will be added.

6. Insure each individual item for full replacement value.

## Policy for Customer-Purchased Computers

Please be aware that there may be compatibility problems if you purchase your own computer for use with Words+ products and that any problems will have to be resolved. See *Buying Your Own Computer and/or Software* on the following page.

## How To Select A Communication Aid

Selecting the best communication and computer access system for a disabled person can be a very difficult process. The ideal approach is to have a comprehensive evaluation performed by a qualified team of professionals. The purpose of the evaluation is to determine three basic kinds of information:

- the person's communication needs
- the person's physical, cognitive, and language skills
- the environmental factors affecting the person's use of a communication system

*For a list of the major centers and private practice clinicians who perform independent evaluations in your area, call Words+ at 800-869-8521, or contact your local Words+ Communication Consultant.*

## Communication Modes

Communication systems provide various forms of output. The most common are speech and printed output. Other modes can be equally important to some users, such as drawing and music, environmental control, and playing games. If the user is a student or is employed, the device should allow for the use of standard software for word processing, accounting, or other purposes as needed for school or work. Be sure the system you select is capable of providing all forms of output the user will require during the life of the system.

## Communication Speed

Communication with a device is much slower than with natural speech. Be sure the communication system you select allows the user to communicate at a comfortable speed.

## Easy to Learn, Easy to Use

Today's communication systems employ a variety of strategies in an effort to provide greater communication speed. Some of these strategies include memorizing coded symbol sequences that represent words and phrases, using abbreviations to represent words and phrases, and selecting words and phrases that the system "predicts" you will write or say next. Be sure the system you choose is easy to learn and easy to use.

## Growth Potential

Usually, a communication aid is funded for a period of at least five years. Many of our systems have been used even longer. You must consider what you need now and what your requirements will be over the life of the system. Be sure to consider expected changes in the user's physical, cognitive, and language skills. Environmental factors, such as mobility, surroundings, and care attendants, also may change. Consider purchasing a computer-based AAC system, such as a Freedom, which is easy to upgrade and allows for maximum growth, capability, and flexibility.

## Reliability, Durability

Communication systems, especially wheelchair-mounted systems, receive a fair amount of jostling and vibration during normal operation. Be sure the system you select is capable of withstanding the rigors of the environment in which it will function. Our notebook computers have been exceptionally reliable and durable in the wheelchair environment.

## Cost

The system you select should provide the greatest amount of function for the price and should have the greatest resale value. The cost of technical support is also a consideration. Words+ offers lifetime, toll-free technical support in the U.S. and Canada.

## Funding

People who need communication systems may receive funding from a variety of sources, including Medicare, Medicaid, private insurance, Veterans Administration, Department of Rehabilitation and Office of Vocational Rehabilitation, school districts (required by law), and private charitable organizations. Words+ has specialists who can help guide you through the funding process. Please call 800-869-8521 for

more information, or visit our website at [www.words-plus.com](http://www.words-plus.com).

## Computers

At Words+ we base our more powerful systems on personal computers (PC) for several good reasons: communication power, ease of use, flexibility, reliability, and cost.

## Communication Power

The greater memory, speed, and display size offered by personal computers make them more powerful communication systems compared to dedicated devices. With these additional resources, we can implement very powerful strategies that are easy to use and provide more efficient communication.

## Flexibility

The typical AAC user's needs change over time. Our products are designed to be customized to your needs, and you can change various settings as your needs change. If you need to transition from one of our software products to another, you can often use the same hardware with minimal additional investment. Also, if you ever need to replace your hardware, you can often transfer your Words+ software to new hardware with minimal new investment. In addition, you receive free updates for life (a shipping and handling fee may apply) of the Words+ software products that you purchase.

## Which Computer is Best?

There are many computers now available that will run Words+ software. Most users today need a battery-powered portable (notebook or subnotebook) computer with a hard disk and a backlit screen. Our computer systems are a natural choice for use in the AAC environment. They come fully loaded with our E Z Keys or Say-it! SAM communication software and are designed to withstand the rigors of the typical AAC environment. If you choose to purchase your computer from another source, please call us for recommendations and be sure to read the following paragraphs.

## Buying Your Own Computer and/or Software

The number of Windows-based computers on the market has increased dramatically. As a result, we will provide toll-free technical support for only those computers purchased from Words+. For computers purchased from other manufacturers, we

have implemented the following policies:

**1.** If you purchase a computer from another source and it is one of the computers for which we have developed standard setup procedures, we will provide configuration support by phone, fax, or letter for the software and hardware you purchased from us. You may send the computer to us, and we will configure the machine, install the software you purchased from us, test it, and return it to you. There will be a charge of \$150.00 (plus shipping) for this service.

**2.** If you purchase a computer that is not one with which we are familiar, but you are buying software from us, you can send the computer and its manual to us. We will configure the system for the Words+ software, install the software, test the complete system, and ship it back to you. There is a \$300.00 minimum charge (plus shipping) for this service.

**3.** If you require assistance installing our software on your computer that you purchased from another source, you may send the computer to us and we will install the software, make any changes needed to the configuration, test it, and send it back to you. The charge for this service is \$75.00 per hour (plus shipping), regardless of whether the software is compatible with our software. If the software is incompatible, we must still charge for our time.

**4.** For computers that you purchase and configure yourself, we will provide telephone support for hardware and software items that you purchase from Words+; however, if it is determined that the problem you are having is not with a Words+ product but with other hardware or software, we will refer you to the appropriate vendor for support.

Policies, prices and specifications are subject to change without notice.

# Ordering Instructions

## How to Order

There are four convenient ways to order products from Words+:

1. Contact your Words+ Communication Consultant. For the name of a Communication Consultant in your area, please call or visit us on the World Wide Web at [www.words-plus.com](http://www.words-plus.com).
2. Call our friendly sales representatives.
3. Fax us at 661-723-2114.
4. E-mail us at [info@words-plus.com](mailto:info@words-plus.com).

## Warranties on Words+ Software and Hardware

All Words+ software programs (exclusive of Abbreviate!) come with a lifetime warranty and include free software upgrades for life (a shipping and handling fee may apply). All Words+ manufactured products and all batteries are warranted to be free from manufacturing defects for a full year from the date of purchase. This warranty includes all parts and labor required to restore defective products to serviceable condition. The Freedom computer-based communication systems come with a three-year warranty on parts and labor. Items that have been damaged by accident, abuse, or misuse are not covered under the warranty. For terms and conditions of warranties covering specific products, please call.

## Payment Policy

For private parties, advance payment or C.O.D. in the form of cash or a cashier's check, credit card or personal check is required. For institutions that have established credit with Words+, a signed purchase order is required before an item is shipped.

Orders paid in advance (prepay) are eligible for a discount. Please call our Sales Dept. at 800-869-8521 for more information.

## Funding Assistance

Purchasing a new communication device should be an exciting time. You shouldn't have to worry about where or how to get funding. At Words+ we have a staff dedicated to providing you with information on all of your funding options, including Medicare, Medicaid and private insurance. Our funding consultants will guide you through the entire process, including providing you with a sample evaluation, evaluation criteria, and a list of documentation specific to your situation or required by the state in which you live. For more information, contact our funding department at 800-869-8521.

## Words+ Web Site

For more information on Words+ or any of our products, please visit us on the World Wide Web at [www.words-plus.com](http://www.words-plus.com).

## Product Information

We want you to be completely satisfied with your Words+ purchase. With that in mind, we've provided the following information to help you select the proper type and style of hardware and software to meet your communication needs. If you should require further assistance, please contact our customer service representatives at 800-869-8521.

## System Requirements

If you are ordering hardware or software products for use with a computer from

someone other than Words+, be ready to provide the following information: the manufacturer of your computer, the type of processor and its speed in megahertz, the amount of RAM, the amount of available hard disk space, and the type and version of operating system.

## Software

When you order Words+ software, you will receive a "SoftKey" (a hardware adapter that plugs into your USB or parallel port). Each SoftKey has a SoftKey Code, which tells your computer which Words+ software you have purchased. Your SoftKey will authorize one or more programs, such as E Z Keys or Say-it! SAM to run on your hardware. If you request multiple software packages that use the same SoftKey, and pay the regular price for the first software program, you will often get a substantial discount on additional software packages. See the catalog or call our Sales Dept. for more information.

## Input Device

If the intended user will not be using a standard keyboard, you will need an alternative input device. If the input device (such as a mouse, trackball, joystick, headpointer, etc.) requires a USB port, serial port, or other specific port, be sure the computer has enough of the required types of ports for the input device and any other devices that you want to have connected at the same time (such as environmental control units).

# PROFILES

## Profile In Success: David Jayne

### Advocate-at-Large

David Jayne has been a friend of Words+ and a user of EZ Keys for nearly 15 years. Diagnosed with ALS 18 years ago, he's been able to communicate his love for his family using an augmentative communication system since his children were toddlers.

Communicating is something David does exceptionally well. He founded the National Coalition to Amend the Medicare Homebound Restriction, (NCAHB) with Bob Dole as honorary chairman. This coalition

successfully made legislative changes to the homebound restriction. Also, after years of frustrating caregiver searches, and wanting to harness the incredible power of the internet, David established RespiteMatch.com. RespiteMatch is a complete service for caregivers to find home health care jobs, and for patients to find home health aides. The detailed search capability enables visitors and members to search for homebound patients and caregivers by health skills, location and much more.

We'd like to communicate a hearty "Thank You" to David for all he's done and continues to do to help others through his tireless efforts.

## Profile In Success: India Ochs

### Human Rights Attorney

After her service with AmeriCorps, India started working at the Robert F. Kennedy Memorial Center for Human Rights in April 2004. Along with the annual book and journalism awards which recognize outstanding reporting of the lives of disadvantaged people, the Memorial has the annual RFK Human Rights Award to honor courageous and innovative individuals striving for social justice

throughout the world. The Memorial then partners with the Human Rights Award winners, providing legal, legislative and other forms of advocacy support for as long as they want and need assistance in achieving their goal.

Her position as Legal Officer enables her to work with all the staff and partners to develop and oversee all of their legal projects. Life as an attorney at a nonprofit in DC is never dull, and India has had opportunities to participate in such things as meetings and events involving the US Government, visiting law firms and schools, and developing petitions for national and international courts. One of her

early highlights was speaking before the UN Working Group on Modern Day Slavery in Geneva, where she used her laptop with EZ Keys to report on the presence of current slavery of farmworkers within the United States.

As busy as her work is, India continues playing soccer on a DC league, and started rowing with a local club. She also has become a member of the Coast Guard Auxiliary, and remains involved on the Board of Directors of her old organization, Common Senses, which continues to develop sport and social programs for youth with and without disabilities.
